DETAILED ACTION

1. Claims 1-13 are presented for examination.
2. Claims 1-13 are allowed.
3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - a. Wu et al U.S. Patent No. 5,223,959 discloses a liquid crystal display (LCD) device that improves color oriented LCD in which the liquid crystal material and the color dye material are intimately commingled within an enclosure of polymer material and/or encapsulated within the structure of microdroplets.
 - b. Fergason U.S. Patent No. 4,662,720 discloses the use of liquid crystal material encapsulated in a containment medium to produce a controlled colored or multicolored output. A non-pleohroic dye is imbibed in the containment medium itself. Different color dyes may be placed at different areas of the encapsulated liquid crystal structure to achieve different output.
 - c. Okumura JP 03186815 A discloses how to obtain the color high-polymer liquid crystal composite film (PDLC) of a high contrast by mixing dichromatic dyestuffs with a liquid crystal and placing a light absorber behind the PDLC.

Art Unit: 2871

4. The following is an examiner's statement of reasons for allowance:

Applicant's claimed invention distinguishes over the prior art for the following reasons. The claims are allowable over the prior art of record because none of the references, either alone or in combination, discloses or renders obvious a color polymer dispersed liquid crystal display comprising color liquid crystal-polymer films formed by **foaming polymer films** mixed respectively with red, green and blue pigments to form porous films of red, green and blue colors, then dropping and injecting a liquid crystal into droplets of the porous film under vacuum condition.
